

110V Power Converter Guide

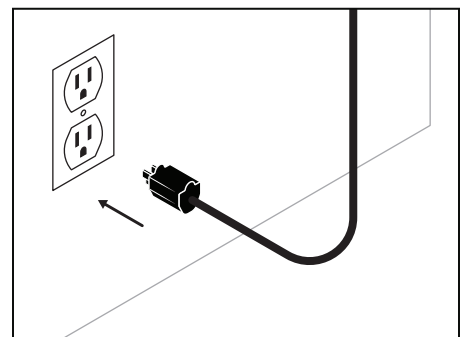

Step 1 Locate the cable that connects the camera or control box to the solar battery enclosure. Gently hand-twist the silver collar counter-clockwise to disconnect the cable end from the battery enclosure.

Step 2 Align notches and plug the cable end into the yellow input on the bottom of the power converter. Gently hand tighten to screw the silver collar into the input.

Step 3 Plug the power converter into a 110V power outlet.

Step 4 Carefully store the battery enclosure and solar panel(s) for future use. Do not store any system components on the ground to avoid the intrusion of water or dirt.
